

About Tricog Health

Tricog Health, the world's leading health AI company, is making great strides in the early diagnosis and optimal management of heart disease. Founded in 2014 by Dr Charit Bhograj, Dr Zainul Charbiwala, Dr Udayan Dasgupta and Abhinav Gujjar, Tricog has already made a significant impact in the field of heart health.

At the core of Tricog's work is a virtual cardiologist, which enables healthcare workers across the world to diagnose patients with heart disease early. Post-treatment, the platform enables remote monitoring of heart patients with the aim to ensure optimal goal-directed medical therapy to predict, preempt and prevent complications.

Over five thousand healthcare facilities, including hospitals, clinics, and nursing homes across the private and government health systems, use Tricog to identify heart disease early and get patients to treatment. Over 11 million patients have been screened, with over half a million critical patients' lives saved. Tricog is present in over 16 countries, with its main markets being India, the Philippines, Malaysia and Kenya.

Tricog's innovation in heart health is changing the game, and the company's vision is to make quality heart care accessible to a hundred million patients by 2027.
