FUJI XEROX ENHANCES AND LINKS ITS CLOUD SERVICES TO ACCELERATE GLOBAL COMMUNICATION THROUGH DOCUMENTS

LINKS ENHANCED SCAN TRANSLATION SERVICE AND WORKING FOLDER

TOKYO, October 29, 2013 – Fuji Xerox Co., Ltd. will launch enhanced [Scan Translation Service](#)^{*1}, a cloud service that promotes global communication, starting November 25^{*2} in Japan and Asia-Pacific countries and regions (North Korea, Taiwan, Hong Kong, Singapore, Malaysia, Australia and New Zealand). To use this service more effectively, on November 1^{*2}, the company will start offering another cloud service, [Working Folder](#), with enhanced function to link with Scan Translation Service to contribute to quick decision-making with smoother communication.

Scan Translation Service

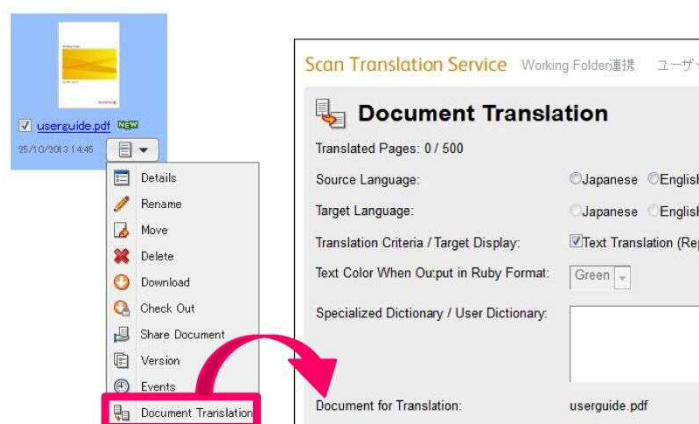

Enabling quick understanding of documents in foreign languages, Scan Translation Service facilitates global communications by streamlining the translation process when users need to grasp the gist of a document written in a foreign language to determine its importance or urgency, or to facilitate communications between people who speak different languages.

Improved convenience in global scenes

In addition to translation between Japanese and English, Chinese (simplified and traditional) and Korean, the enhanced service now offers direct translation from English to Chinese (simplified and traditional) and Korean. Also, the user interface^{*3} and operation manual are now available in English, Chinese (simplified and traditional) and Korean, enabling users whose mother tongue is not Japanese to easily use the service..

Linkage of Fuji Xerox's cloud services to facilitate communication

By linking Scan Translation Service with Working Folder, a cloud service that supports document sharing, documents in DocuWorks and PDF formats stored in Working Folder can be translated using Scan Translation Service directly from the cloud with simple operation. The linkage of the cloud services will facilitate communication and information utilization.

*1: As the service is based on machine translation, the translation may not be as accurate as users require. However, the translation accuracy can be improved by adding the dictionaries, and it is recommended to customize the dictionaries.

*2: The launch date will vary by country/region.

*3: UI language available on a multifunction device depends on the setting and structure of the device.

Information on Scan Translation Service:

Working Folder

Working Folder enables users to send, receive and share documents at offices or in mobile environments, allowing an access to designated information anytime, anywhere. It contributes to seamless utilization and distribution of documents that are used in group work within an organization or between corporations, facilitating collaborations to achieve swift decision-making and enhanced business efficiency.

Promotes mobile work with high level of security

The new function Secure Drawer allows viewing documents stored in Working Folder without downloading to a terminal such as a PC and mobile device. This also reduces risks of having documents viewed by others in case a terminal is lost. Since it does not leave documents on terminals, Working Folder can be safely used in a mobile environment.

Enhancement for global use

In line with the linkage with Scan Translation Service, more languages are available—traditional Chinese and Thai in addition to the existing Japanese, English and Korean—thereby supporting communication in a globalized business environment. With its use from browsers of PCs and mobile terminals as well as from user interface of multifunction devices in the said languages, the service is now available in the local language of Japan, Australia, New Zealand, Singapore, Malaysia, Hong Kong, North Korea and Thailand as well as Taiwan.

Functions enhanced to improve work efficiency and convenience

Conventionally, documents stored in Working Folder had to be downloaded or shared one at a time. The enhanced function enables several documents to be selected and downloaded or shared all together, contributing to higher efficiency. Additionally, an email can be delivered when a document is stored in a folder while it was only sent on a drawer basis, enabling to manage document sharing in a more subdivided level.

Easier linkage with digital multifunction devices

A tool to access Working Folder has been installed in the 18 models^{*4} of the ApeosPort-V C and the DocuCentre-V C series, full-color office digital multifunction devices released on October 23. Users do not need to install the software from a computer, enabling setting the linkage with Working Folder in simple operations on the control panel of the devices.
