## Fuji Xerox Enhances the Lineup of Monochrome Production System to Meet Broad Business Needs for Short-run and On-demand Printings

### Launches Nuvera 314 EA Perfecting Production System and Nuvera 157 EA Production System in Japan

**TOKYO, January 24, 2014** –Targeting the high-speed digital printing markets, Fuji Xerox Co., Ltd. will launch two monochrome production systems–Nuvera 314 EA Perfecting Production System and Nuvera157 EA Production System with print speed of 314 pages per minute (ppm)\* and 157 ppm\* respectively. The installations of the new systems will start on February 4.

Incorporating a tandem engine, the Nuvera 314 EA Perfecting Production System features the fastest print speed among Fuji Xerox’s monochrome cut-sheet production systems, while Nuvera157 EA Production System adopts a single engine. By adding the new systems to its monochrome digital printer lineup, Fuji Xerox allows customers to select systems more flexibly depending on their business lines and work volume.

By adopting the Emulsion Aggregation (EA) toner with an established reputation, the new systems realize offset-level monochrome print quality through a matte finish with controlled-gloss. In addition, the systems link with FreeFlow Digital Workflow Collection, Fuji Xerox’s software that enables users to enhance, automate and simplify the workflow. Moreover, by combining the systems with various finishing devices, the total printing processes from prepress to final output will be connected seamlessly, improving the overall productivity of the printing workflow.

As monochrome digital printing is used for a broad range of purposes from short-run and on-demand print as well as large-volume output including corporate reports, invoices,, manuals, educational materials and booklets, high-level productivity and stable operations are indispensable for the systems.

Based on its track record of leading the production market, Fuji Xerox will contribute to further streamlining customers’ printing operations by offering productive and quality production systems.

\* Long-edge feed, duplex printing

## List Prices

### Main Units

Product Names	List Price (before tax)
Nuvera 314 EA Perfecting Production System Production Stacker Model	41,800,000 yen +
Nuvera157 EA Production System Production Stacker Model	24,550,000 yen +

The above prices include the sheet-feed module, which is a requisite.
