

NEWS RELEASE

【Details】

- Logistics platform

The Company is working with Intel Corporation on an IoT platform to make the movement of goods and the quality of logistics traceable.

- Sensing device

The Company is developing an IoT device capable of managing logistics information.

- Commercial distribution platform

The Company will provide services that utilize logistics traceability data.

- Services offering traceability should first become available in April 2021.
- Other services in the planning stage are inventory optimization, payment functions and asset sharing functions.
- Future consideration will be given to open platforms (cross-industry consortiums).
